

ATKINS

St Lucia Coastal Habitat Mapping Project

Improving Our Understanding through
training and awareness raising

ENVISION

www.atkinsglobal.com

**What data is relevant for
habitat mapping and why?**

- **A habitat map is comprised of different types of data and has different levels of details.**
- **Different users may have different requirements and uses for habitat maps.**
- ? With regard to marine habitat data, which level of data is most appropriate for your agency (site, region, area)?
- ? What marine habitats do you consider to receive the most “stress” and which do you consider to be the most critical for St. Lucia?
- ? Which marine habitats do you think indicate “status” and “health” of the wider environment?

Are there differences between the way sectors identify data needs and habitats, and does this matter?
